FUNDING

SEED

PRODUCT DESCRIPTION

4QT is a Swiss deep-tech company building the electric drivetrains and autonomous ground vehicles that power the next generation of heavy machinery. Our patented, rare-earth-free axial-flux drivetrain, the Double Rotor Machine, already runs a hybrid-electric, autonomy-ready dumper on live construction sites. We are evolving from drivetrain innovator to full-stack UGV OEM, serving defence, construction, and critical infrastructure: built in Switzerland, for Switzerland and Europe.

SERIES A

PRODUCT DESCRIPTION

Ophthorobotics, an ETH Zurich spin-off, is building the world's first fully autonomous, robot-assisted intravitreal injection (IVI) platform. IVI is ophthalmology's most frequent procedure, yet it is still done by hand, needs a surgeon every time, takes ~10 min and risks errors and infection. Our AI-guided system injects precisely, is supervised remotely by one surgeon across multiple rooms, and integrates sterile airflow, turning a capacity-constrained surgery into a scalable office procedure.

RegCheck

LOOKING FOR

INVESTORS - PARTNERS
CUSTOMERS - TALENTS
RETAILERS

FUNDING

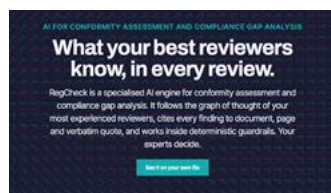

PRE-SEED

PRODUCT DESCRIPTION

RegCheck (Softreg GmbH) is an ETH Zurich-affiliated Swiss company building compliance services on its own AI. Our software checks documentation against regulatory and normative requirements and traces every finding to its evidence, so experts can verify it. Our first service, through a separate company being set up, is acting as EU authorised representative and importer for regulated businesses. Audit services follow. Backed by Innosuisse, with paid pilots in Switzerland and Germany.

PRE-SEED

PRODUCT DESCRIPTION

TruLux is building the trust layer for physical goods in a digital world. Our foundational vision model uses only a few smartphone photos to identify, verify, inspect and fingerprint an item, with no tags, pre-registration or added hardware. We started with luxury products where counterfeits are abundant, and are in pilots with retailers and a Swiss luxury watch brand. Bags, jewelry and collectible cards are on the roadmap. We are now developing the TruLux Trust Agent to bring this verification into agentic commerce.

PRODUCT DESCRIPTION

Biologic drugs can trigger anti-drug antibodies (ADAs) in patients, which reduce efficacy, cause safety issues and drive late-stage failures. Current preclinical tools predict this poorly. Alp Bio combines human tonsil organoids, which reproduce the germinal center response where ADAs form, with protein language models trained on clinical immunogenicity data. Drug developers get a human-relevant immunogenicity risk readout before the clinic, and we redesign high-risk molecules into lower-risk variants that keep their function.
